

Ventile®

unique material

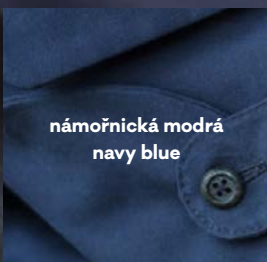

History

Ventile's long pedigree goes back to the Second World War for RAF clothing and was used in the first summit of Everest in 1953. Ventile® is ideal for naturalists, bushcraft, cycling and climbing.

High quality water-resistente Ventile® material made from 100% cotton. The performance of Ventile® fabrics results from the properties of cotton fibres which expand when they come into contact with water. Ventile® fabrics offer long life, superior breathability and **excellent protection against wind, rain and snow**, with the added advantage of being quiet and comfortable.

Maintenance

Ventile® cotton products need to be clean quite differently than you are used to synthetic materials. For laundry use non-aggressive detergents or pure liquid soap.

Since the material is 100% natural and no chemical is used for color fixation, after each wash the material change slightly and gets the patina.

CLEANING:

- Turn the garment inside out
- Close the zippers
- Wash separately
- Machine wash in warm water on a gently cycle using pure liquid soap
- Don't use washing machine spinning
- Reshape the garment on a hanger and allow to dry naturally avoiding direct sunlight
